

HA6.4

- 1) Solve simultaneously:  
 $2x - y = 10$  and  $5x + 3y = 3$
  
- 2) Simplify  $\sqrt{5} \times \sqrt{60}$
  
- 3) ?  $\text{m}^2 = 500 \text{ cm}^2$
  
- 4) Work out the value of  $2x^3 + 3x$  when  $x = -2$
  
- 5) Solve by factorising  $6x^2 + 17x + 5 = 0$
